HISTORY AND TRADITION

POLYFASER's success story began in 1968 when this small family business was founded by Josef and Elda Wagmeister. Thanks to a combination of regional ties and a global perspective, the company grew to become a leading European company for the production of swimming pools in glass fibre reinforced polyester and pool roofings, affording top priority to high quality materials and the reliability of transportation, assembly and service. [To this day, all products are hand-crafted in Prato allo Stelvio in South Tyrol.](#) Under the management and guidance of the founders' three sons, Horst, Helmut and Manfred, over 100 qualified workers from the surrounding area contribute to the success of this family business thanks to their many years of experience.

JOIE DE

Simple, direct and stylish: Through their clear-cut, linear design, rectangular pools made from a single piece create classic elegance which discreetly blends in the existing environment, whilst adding to its appeal. The POLYFASER product range includes ten rectangular pool models in various sizes and designs, all completely impermeable and durable. Wide steps ensure easy access into the refreshing and seductive bright blue water, appearing especially natural and clear thanks to the white colour of the pool. Two ergonomically designed lounges ensure relaxation and a sense of well-being. On request, they are also available with massage functions – for pure relaxation!

VIVRE

All pools can be produced to allow a very high level of water.

DIVE

A POLYFASER pool is an eye-catcher in any setting. The wide range of models and designs ensures that the perfect pool can be found for all tastes, needs and settings and can be further personalized thanks to the selection of colours: *four different shades are available for an exclusive 3D surface coating in a granite look.* Each one of our monobloc pools can therefore be adapted to your personal preferences. All coatings are extremely durable and resistant, even when exposed to extreme elements such as frost or salt water. For an additional optical feature, the pool surround can be covered with stone slabs, tiles, wood or various other materials according to your preferences.

Ocean blue

If you share the philosophy that less is more, if you always focus on the essential things and would like to get the best out of your pool, then you can choose a model with a corner entrance. [This place-saving alternative without front steps will allow you to enjoy optimally your pool for its actual purpose: to swim across its full length.](#) The straight, minimalist design emphasises the sporty character of this modern pool model, for outdoor swimming without limits.

Ceramic colour anthracite grey

RELAXATION

SILENCE

Our monobloc pools with individually shaped special steps reflect our passion for detail. Four models in varying shapes and designs with elegant and safe built-in steps enlarge the range of products offered by POLYFASER, ensuring diversity of design in your area of leisure. The built-in seat, which can be fitted with massage functions on request, ensures soothing relaxation. On request, some models can be fitted with a technical equipment chamber. In addition, all models are also available with a higher water level (skimmer).

BREATH IN

Pure harmony: Thanks to their soft, rounded design, our free-style, monobloc pools fit perfectly into any outdoor area. The elegant, curvy design is enhanced by the comfortable, built-in steps and a pool seating, inviting you to relax and unwind, with the option to equip it as a massage bench. Thanks to the fact that the pools are made "from a single piece", the soft shapes are completely smooth and free of any gaps or joints. Choose the free-style model which best suits your personal preferences and requirements, with a choice of five models in varying sizes and designs!

Monobloc pools with curved, Roman-style steps, boast a classic, easy-access and elegant design with a bold sense of style. Follow Neptune into the refreshing waves and enjoy the glorious days of ancient Rome. The pools themselves have an attractive clear, linear shape which looks superb in any setting. Choose from six different pool models in varying sizes and designs. All our pool surrounds are impeccably crafted in glass fibre reinforced polyester and require no additional covering. The smooth even pool surface is pleasant to walk on and is easy to clean and maintain.

FEEL GOOD

More than just a practical detail: The "overflow" feature is impressive and exclusive, whilst at the same time unobtrusive. The water level is completely flush with the pool surround, creating the sensation of freedom and the optical illusion of a larger overall surface area. The pool with overflow also prevents the formation of dirt on the edges. The modular production with a combination of straight and curvy lines, varying water depths and various other extras, allows extremely personalized creations that perfectly satisfy your wishes. We are pleased to assist you through every stage from planning to installation, drawing upon our many years of experience.

LET IT

GO

There are many different ways to cover a pool. The integrated underfloor pool cover is definitely one of the most practical, uncomplicated and cleanest – so discreet in fact, that it is hardly even noticeable when open. [Floating pool covers](#) guarantee safety for children and animals. [Safety and reliable protection against pool debris](#) are the major advantages. In addition, pool covers offer optimal insulation with a noticeable saving in heating costs as the warmth of the water is efficiently trapped. Positive side effect: The swimming season is extended. The cover can be opened and closed by means of a modern electric motor. Almost all pools in the POLYFASER range, with the exception of our free-style models, can be fitted with this extremely elegant and practical solution.

Individual length

Mod. Kos XL 4,00x12,50x1,53m

NOT JUST A BORDER

An attractive surrounding edge gives your pool the perfect finishing touch. With all POLYFASER pools, the impeccably crafted pool surround can be completely tailored to suit your needs. Popular materials that are easy to maintain include stone slabs, tiles or wood, which can be fitted either below or above the pool surround, creating the most suitable and elegant frame for your pool. The overflow channel also can be covered with either a classic plastic grid or stone slabs.

Exclusively from POLYFASER:
The "Back" roller box is built-in to the back of the pool wall and is almost invisible, leaving the entire length of the pool free. The vertical screen is in the colour of the pool and can be either swivel-mounted or fully detachable. It is available for all models with the exception of free-style pools.

"Cover Light" roller box. It is installed directly inside the pool and can be disguised with an additional cover on request, which can also serve as a comfortable, practical seat. This installation method is available for all pool models with the exception of our free-style pools.

This roller box is built-in permanently behind the swimming area and fitted with a weight-bearing cover in polyester in the colour of the pool.

The POLYFASER range comprises numerous monobloc pool models. Which model is best suited to your outdoor setting? A free-style pool with soft, harmoniously rippled curves or one of our linear, stylish rectangular designs? Do you prefer steps in a classic Roman-style or in a more customised style? A monobloc pool with a roller box ensures undisturbed fun in the pool, safety and excellent heat storage in the truest sense. **No matter your choice, with a POLYFASER pool you will always choose outstanding quality, functionality and design to meet your highest aesthetic demands.** All models are produced seamlessly from a single piece and have a thermal insulated floor, fully insulated with sandwich panels on request, quick and easy to install. **On request, all models are also available with a higher water level (Skimmer).** Various water features and accessories such as countercurrent, massage systems, lighting etc., can be installed in all pool models. Dive into a world of relaxation!

TIME FOR THE
SPIRIT

Well-being and relaxation are also becoming more and more important in the public sector. [POLYFASER's long-standing experience and expertise makes it the right partner for high-class recreational activities.](#) For 50 years we produce pools not only for private customers but also for the public sector and commercial clients such as hotels. The design possibilities in this case are almost endless: We can produce pools in any size and shape. We assist our customers through all stages, from planning to installation.

INSTALLATION

Punctual, flexible and above all fast delivery and assembly are all part of POLYFASER's commitment to quality. Products are delivered directly from our factory to the customer by our own staff, who are completely familiar with all products thanks to their many years of experience. Our own vehicle fleet includes flat-bed lorries and special vehicles fitted with crane devices. In order to ensure smooth, fast delivery from the very start, we offer advice and support during the planning stage.

LAY IT ON

POLYFASER has always seen the value in crafting its products exclusively by hand. All layers of glass fibre are applied manually and further reinforced with stiffening ribs. We also draw upon our experience for future-oriented technology: In joint cooperation with our long-standing suppliers of raw materials, we constantly strive to improve materials and production techniques. Painsstaking controls performed by both ourselves and external bodies guarantee consistent top quality. In the event that any problems should nonetheless arise, we always strive to find a solution in a swift and uncomplicated manner. Over the many years since the start of our business, we have learnt that motivated workers and satisfied customers are the key to success. The experience gained over the decades is drawn upon and reflected in our daily work. In our 50 years of business, we have installed an impressive number of pools. POLYFASER also produces boat hulls – using the same processes and materials as for our pool production – for a renowned shipyard in Austria, working with sailing boats and speedboats of up to 1,000 HP.

50 years experience

A company from **südtirol**

20 years WARRANTY
on water tightness of the polyester basin

- 1 Gelcoat surface, special coating for swimming pools

For a longer swimming season and swimming in almost any weather, pool roofings from POLYFASER are the right choice.

They ensure safety for people and pets, less pool cleaning and maintenance and noticeable savings in energy costs.

Our in-house pool designs draw upon the experience gained over decades of pool production, using a single source to provide you with everything you need.

Strict quality controls, also by the TÜV certificate organisation, are carried out during all stages of production, which takes place exclusively in South Tyrol. If you too are dreaming

of up-to-the-minute design and perfection down to the last detail, request the catalogue of our pool roofings now!

WELL COVERED

KNOW HOW

Infopoint Bad Fischau (Vienna)

POLYFASER stands for 50 years of experience in the production of swimming pools. Production takes place entirely in our facilities in Prato allo Stelvio in South Tyrol, covering more than 30,000 square meters. State-of-the-art technology, energy recovery, energy production from biomass (from a wood chip plant) and solar panels guarantee sustainable and responsible production.
